AZUR 2P

COATING

DO YOU REQUIRE DURABILITY FOR EXTREME CONDITIONS?
THIS WORLDWIDE INNOVATION
WITHSTANDS THE HARSHTEST
CONDITIONS AND EVEN MORE...

AZUR 2P is a revolutionary coating that provides perfect protection for solar module surfaces. It is ideally suited for any photovoltaic system worldwide, even in severe desert environments. Its true value lies within its unique ultra resistance: AZUR 2P opens up new horizons!

AZUR 2P offers a wide variety of benefits:

- Universal application in any environment
- Higher efficiency
- Improved user friendliness
- Higher acceptance

The coating has many advantages, even in moderate temperature zones, which makes your solar system more efficient. Intensive tests under the harshest conditions have proven the universal applicability of AZUR 2P.

Authenticity guaranteed only with this seal!

SOLAR MODULE SANDSTORM-PROOF

Desert environments are not suitable for photovoltaics?

Desert regions are abundant in unharnessed energy solar energy, which opens up new dimensions for photovoltaics.

The lasting protection of your capital investment even against extreme climate conditions makes desert solar power a dream come true and economically sustainable.

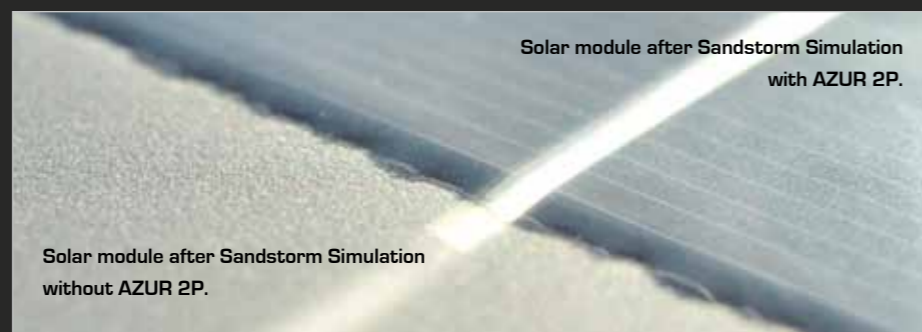

Only a small step for you, but a big step forward to clean desert solar power.

The AZUR 2P advantage:

Photovoltaics are now universally usable – certified resistance in even the harshest of desert or steppe terrains.

Sandstorm Simulation:
laboratory tests.

Solar module after Sandstorm Simulation
with AZUR 2P.

Solar module after Sandstorm Simulation
without AZUR 2P.

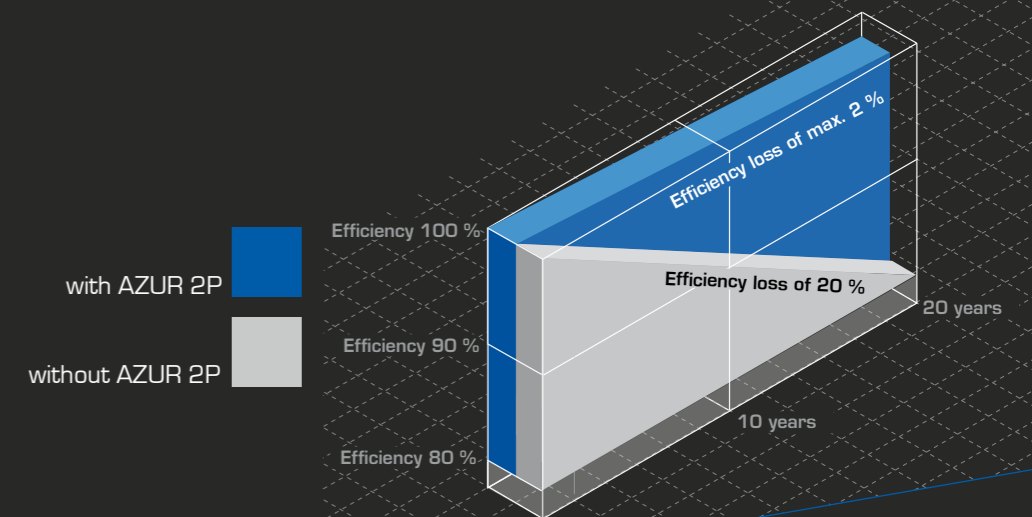

UV FILTER: HIGHER EFFICIENCY

1% wear per year? Not with AZUR 2P!

Until now solar modules lost up to 1% output annually, 10% after 10 years of operation, 20% after 20 years. The AZUR 2P coating offers perfect protection against UV rays and clouding, and reduces the degradation process of solar modules tenfold. Even after 20 years in operation, efficiency will still be at a sensational 98%.

The AZUR 2P advantage:

increased yield potential for photovoltaic systems –
a longer life cycle guarantees improved capacity.

SURFACES

PROTECTION AGAINST: ACID RAIN – SALT MIST – AMMONIA

Can't see out? Let the sunshine in...

Photovoltaic systems are exposed to numerous hazards:

scratches, cracks and damage of all kinds. AZUR 2P offers reliable protection against soiling (e.g. pollen or bird droppings and emissions from industrial or agricultural operations).

Last but not least the coating offers reliable protection against corrosion of the module frame (e.g. salt spray), therefore increasing both life cycle and overall efficiency of the entire system.

The AZUR 2P advantage:

Photovoltaic systems require less maintenance, which reduces personnel costs and simultaneously increases efficiency level.

NEW PERSPECTIVES FOR PHOTOVOLTAICS

AZUR Solar is a successful international company and one of the leading all-round providers for photovoltaics.

AZUR 2P is an innovation, opening up revolutionary opportunities in solar technology. AZUR 2P is available exclusively at AZUR Solar – only genuine with the AZUR seal of approval! Get in touch with us today: let us tell you first hand about all the great benefits of using AZUR 2P.
